Rock Bomb - Nitroglycerin

Since you should have a Nitroglycerin on you at this time go ahead and grab a Rock Bomb from the chest. Then move South and blow the wall to open a new area of the Temple.

To Solve this puzzle the 1st thing you want to do is push the rock to the far right in the top row down as far as you can.

Then wait till the viper is at the top of his path and quickly push the rock at the bottom to the left, trapping the viper. As such.

Now push the middle rock down when the viper is to the left of trapping him in his area. As such.

From here move the rock to your right over and the rock to the right of the key down.

And you should be able to pick up the third Temple Key Segment.

Don't forget to pick up all the money and read the book, It holds a hint to where a chest key is. More on that below.

You can also break the vases for some Talismans and the two smaller chests for more Viper Antivenom. If you're quick enough you can do it without getting bitten.

To solve this puzzle you have to move the three MC's to each of the three pressure plates around the room. In order to do this the left and right MC will stay still. The middle one is the one you can control by moving like normal. Move to the pressure plate at the bottom. Now depending on which way you are facing when you are standing on the plate will determine which way the other two MC's will move. As long as you're standing on the plate the two MC's will continue to move. So you have to step on and off the plate at the right times.

You first want to approach the plate from the bottom and step on it so you're facing North so the MC's will move up. Until they are in the position seen below.

Now move around so you approach the plate so you're facing to the West and move the MC's to the West until the left MC is below his pressure plate. Seen below.

Now approach the plate from the bottom again so the MC's move up again. The one MC should be on his plate now.

Now move around and step on the plate so you're facing East and move the MC's till the MC's are in the following positions.

Now step on the plate from the bottom again so the MC's move North. Both MC's should be just to the right of the plates now.

Now step on the plate so you're facing West, both MC's should move onto the plates and you should be put back into one MC again.
